STF-R824 Segmented Riser

Our modular segmented riser addresses many problems concerning sales, shipping and installation of tank risers. Until now risers have been large and bulky; conventional risers are inconvenient and costly to ship and store. The STF-R824 solves these problems with its modular segmented construction; it's shipped and stored in three pieces, then easily assembled at the job site, drastically reducing unit cost.

We've thought of everything with the STF-R824. It assembles in seconds at the job site and can be easily cut to the desired field height. Installers will like the convenience of nine flat surfaces and fifty-one drillable dimples per riser allowing easy access for electrical and PVC fittings, as well as mounting locations for options such as our float tree bracket or safety net.

Key features:

Heavy duty 3/8" top flange for securing lids

Accepts most standard 24" dia. lids as well as SIM/TECH iron lids

Tapered dove-tail locking system provides watertight seal between segments

No direct vertical paths for water

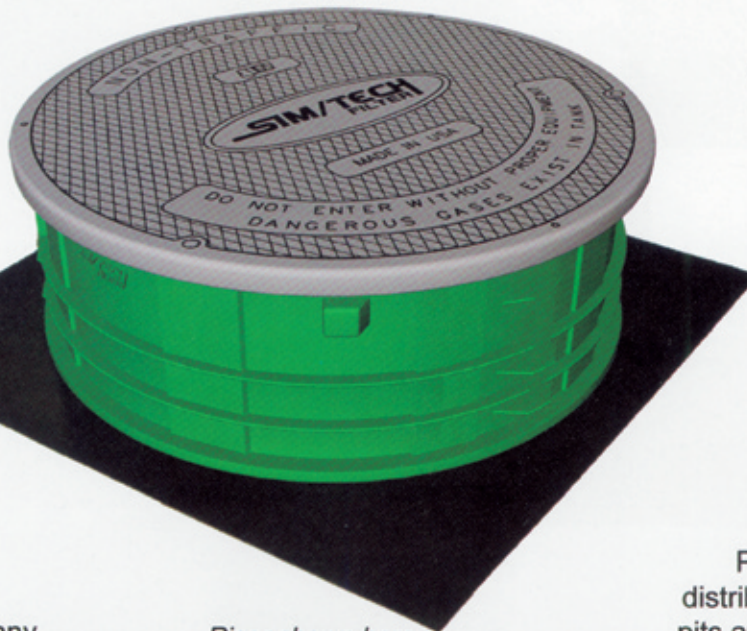

9 flat surfaces and 51 drillable dimples for access and options

8" riser is stackable to virtually any height and is ribbed for easy on-site cutting to field heights of 2" or 4"

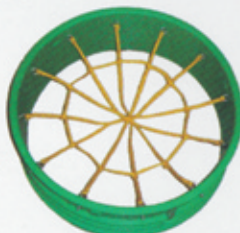

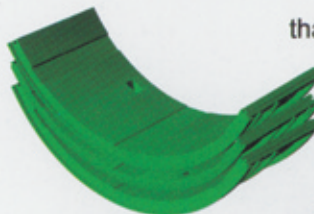

Options and covers:

- STF-CI24 cast iron cover
- STF-SF24B structural foam cover (black)
- STF-SF24G structural foam cover (green)
- STF-BL24 3-rod latching cover (black)
- STF-GL24 3-rod latching cover (green)
- STF-T24 "Tee" handle for above
- STF-N24 safety net w/mounting hardware
- STF-106FTB float tree bracket
- STF-AR24 tank adaptor ring

It is highly recommend that you use SIM/TECH's STF-N24 security net on all systems to prevent accidental entry while systems are being serviced.

Riser shown here with STF-CI24 cast iron cover and STF-AR24 tank adaptor ring.

Additional features:

Pre-molded latch housing for 3-rod latching cover

Non corrosive and environmentally safe

Modular ribbed construction of thermoplastic for unprecedented vertical strength

Flanged for pre-casting

Stacks on standard corrugated culverts

Perfect for zone valve distribution centers, meter pits and containment rings

The STF-R824's modular segmented design requires considerably less space than conventional risers. Which makes shipping, warehousing and transporting to the job site much more cost effective and convenient.
